                                                                                                                                                                                                                                                                                                                                                                                                        Nguyen T., Shapiro D.A., George S.R., Setola V., Lee D.K., Cheng R., Rauser L., Lee S.P., Lynch K.R., Roth B.L., O'Dowd B.F.;

"Discovery of a movel member of the histamine receptor family.";

Mol. Pharmacol. 59:427-433(201).

-1- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).

C. -1- STHILARITY: Belongs to family 1 of G-protein coupled receptors.

Ly C., Wilson S., Kuei C., Lovenberg T.W.;

Lu C., Wilson S., Kuei C., Lovenberg T.W.;

Submitted (MAR-2001) to the EMBL/GenBank/DDBJ databases.

L. SUBCELLUIAR LOCATION: Integral membrane protein (By similarity).

-!- SINGLARITY: Belongs to family 1 of G-protein coupled receptors.

-1- TISSUE SPECIFICITY: Expressed predominantly in the CNS, with the greatest expression in the thalamus and caudate nucleus. The various isoforms are mainly coexpressed in brain, but their relative expression level varies in a region-specific manner. Isoforms 3 and 7 are highly expressed in the thalamus, caudate nucleus and cerebellum while isoforms 5 and 6 show a poor expression. Isoforms 5 and 6 show a high expression in the amygdala, substantia nigra. Greek and special cortex and hypothalamus. Isoform 7 is not found in hypothalamus or substantia nigra.
-!- DISEASE: Defects in HRH3 are a cause of SNy-Drager syndrome (MIM:146500). This syndrome is characterized by orthostatic hypothension, bladder and bowel incontinence, anhidrosis, iris atrophy, amystrophy, ataxia, rigidity and tremor.
-!- MISCELLANEOUS: Does not bind to cimetidine and tripolidine. Shows modest affinity for thioperamide, imetit, N-alpha-methylhistamine and R(-)-alpha-methylhistamine isoform 4 is unable to bind to idodoproxyfan while isoforms 1 and 3 bind it with high affinity.
-!- SIMILANITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "The DNA sequence and comparative analysis of human chromosome 20.", Nature 414:865-871(2001).
-!- FUNCTION: The H3 subclass of histamine receptors could mediate the histamine signals in CNS and peripheral nervous system. Signals through the inhibition of adenylate cyclass and displays high constitutive activity (spontaneous activity in the absence of agonist). Agonist stimulation of isofoxm 3 niether modified

Submitted (JUL-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: The H3 subclass of histamine receptors could mediate the histamine signals in CNS and peripheral nervous system. Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of agonist) (By similarity).
-!- SUBCELULIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.

TISSUE SPECIFICTTY: Expressed abundantly in brain, most notably throughout the thalamus, the ventromedial hypothalamus and the caudate nucleus. Isoform i is largely predominant in all tissues. MISCELLANEOUS: Proxyfan acts as a potent neutral antagonist while thioperamide, ciproxifan and FUB465 act as potent inverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PROSITE; PS00237; G PROTEIN RECEP F1 1; 1.
